

The Boss

– the monitoring genius

Your entire production site/factory/plant at your fingertips through a unique and user-friendly monitoring system. Gain a full overview of production anytime, anywhere! **The Boss** has unlimited link-up options, allowing you to connect to both new and existing equipment.

Knuro has 10 years of experience developing machinery and automation solutions for processing plants and other industry.

We are proud to launch our latest product - **The Boss**, a flexible tool for monitoring all types of processes in industrial production. Knuro has created a solution that is tailor-made for the requirements of salmon and trout production.

Beijer Electronics is our supplier of Zenon software, which amongst other things is employed in all types of industry, power production and the pharmaceutical industry across the globe. To name one example; it manages the entire production process in BMW's plants, factories and works.

Due to its unique flexibility, it can manage and monitor any form of production. Zenon can communicate with all types of PLC's and management systems available on the market.

Security for you as the customer lies in that this is a renowned and exhaustively tested system with second to none support arrangements.

The Boss can be expanded incrementally – and adapted accordingly as customer requirements change along the way.

The image to the right shows a few examples of information that may be retrieved from **Knuro Analysis** – our own solution developed for monitoring of the gutting line.

The Boss generates and transmits automatic reports on current production to designated persons in the company.

Status overview showing production data so far on that day (date shown top right corner).

Shows a selection of expanded info. Here you can retrieve background data to gain more detailed information on the status for gutting lines.

Trend that shows number of fish fed into the machine per hour and per gutting line. You can also retrieve historic trend reports. The system can generate trend reports for all systems as required by the customer.
